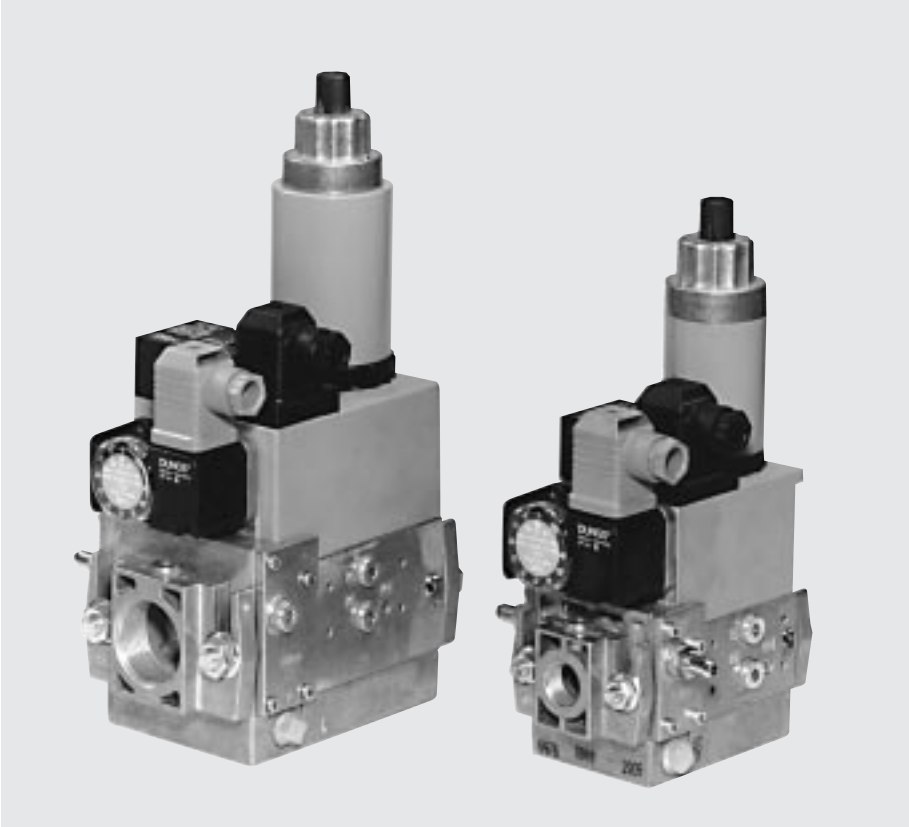
GasMultiBloc
Combined regulator and safety shut-off valves
Two-stage function

DUNGS®

MB-ZRD(LE) 405 - 412 B01

7.24



Technical description
The DUNGS GasMultiBloc integrates filter, regulator, valves and pressure switches in one compact fitting. Various designs are possible by the modular system:
- Dirt trap: microfilter
- One regulator and two main valves: B01
- One one-stage valve and one two-stage valve
- One valve is fast opening, one valve is slow or fast opening
- Solenoid valves up to 360 mbar as per DIN EN 161 Class A Group 2
- Sensitive setting of output pressure by proportional regulator as per DIN EN 88 Class A Group 2
- High flow rates with low pressure drop
- DC solenoid drive interference degree N
- Main volume restrictor and partial volume restrictor at valve V2
- Hydraulic opening delay
- Flange connections with pipe threads as per ISO 7/1
- Simple mounting, compact, light-weight

The modular system permits individual solutions by using external ignition gas tap in connection with separately controlled valves, by adding a valve proving system, mini/maxi pressure switches, pressure limiters, limit switch and closing stroke limiter at valve V2, regulator blocking for liquid gas applications.

Application
The modular system permits individual solutions in gas safety and regulator engineering. Suitable for gases of families 1, 2, 3 and other neutral gaseous media.

Approvals
EC type test approval as per EC Gas Appliance Directive:
MB-ZR...405-412 B01 CE-0085 AP 3156
EC type test approval as per EC Pressure Equipment Directive:
MB-ZR...405-412 B01 CE0036
Approvals in other important gas consuming countries.

Printed in Germany • Rösler Druck • Edition 06.04 • Nr. 214 763

Functional description of gas flow

1. When the valves V1 and V2 are closed, chamber A is under inlet pressure.
2. A hole D in the filter housing connects min. pressure switch with chamber A. If the inlet pressure applied to the pressure switch exceeds the incoming reference value, it switches through to the automatic burner control.
3. After release by the automatic burner control, valve V1 and stage 1 of valve V2 open. The gas flows through chambers A, B and C of the GasMultiBloc.
4. On request, the second stage of valve V2 opens.

Operating method of valve-regulator combination on valve V1

A regulator compensating for residual pressure is integrated in valve V1 (pressure regulating part). Armature 8 is not connected to valve plate unit 3. When it opens, armature 8 pretensions compression spring (V1) 5 and releases the valve plate unit. When the valve closes, the armature acts directly on the valve plate unit. The output pressure upstream of valve V2 is defined by pretensioning regulating spring 7 (tension spring) via setting screw 18.

The output pressure acts via opening E on the working diaphragm 22 of the regulator part. In regulated state, setting spring inlet pressure and pressure of working diaphragm are in force equilibrium. The compensating diaphragm ensures the fast closing function of valve V1 and a high regulating quality.

Operating method of valve V2

Armature 14 of valve V2 is connected to valve plate unit 12. When it opens, armature 14 pretensions closing spring 13. The valve opening of stage 1 can be set by limiting the armature stroke by means of the main volume restrictor 19.

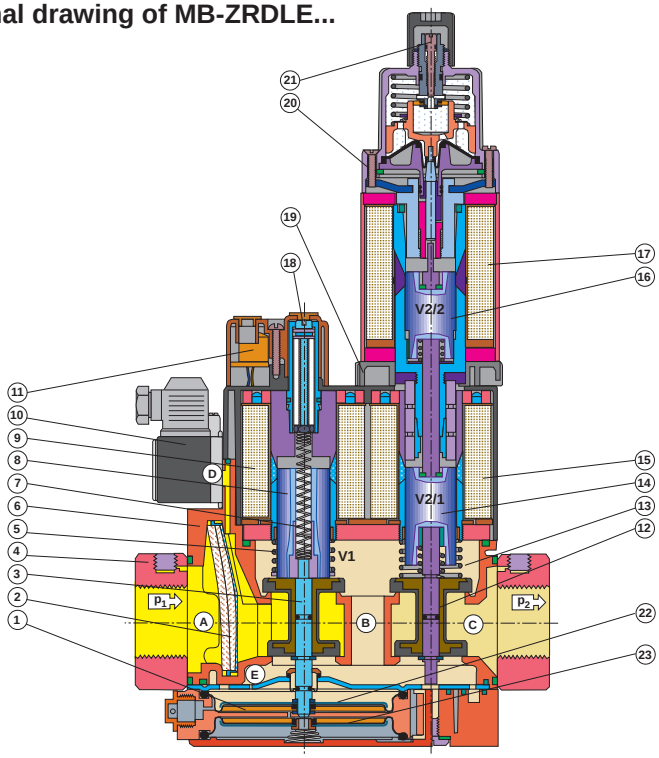
Min. opening (residual stroke) of valve (0.5 to 1.0 mm)

When the second stage of valve 2 opens, closing spring 13 is continuously pretensioned. The maximum valve opening of stage 2 can be set by limiting the armature stroke of armature 16 using the main volume restrictor. Main volume restrictor 20 is set by rotating the adjusting plate or the hydraulic brake . The fast and/or slow opening characteristic acts on both stages. It is influenced by setting the fast stroke at the hydraulic brake under the cover.

Closing function

When the supply voltage to the solenoid coils of valves V1 and V2 is interrupted, they are closed within < 1 s by the compression springs.

Sectional drawing of MB-ZRDLE...



1	Pressure regulator	10	Gas pressure switch	Setting:	
2	Microfilter	11	Electrical connection	18	- Gas pressure p_a
3	Valve V1	12	Valve V2	19	- Partial volume, 1st stage

Specifications

Nominal diameters Flange with pipe threads as per ISO 7/1 (DIN 2999)	MB-ZR…405/407 B01 Rp 1/2, 3/4 and their combinations	MB-ZR…410/412 B01 Rp 3/4, 1, 1 1/4 and their combinations
Max. operating pressure	**360 mbar (36 kPa)**	
Output pressure ranges	**MB-… S20/S22 p_a: 4 mbar to 20 mbar** **MB-… S50/S52 p_a: 4 mbar to 50 mbar**	
Pressure stage	PN 1	
Media	Gases of families 1, 2, 3 and other neutral gaseous media	
Ambient temperature	-15 °C to +70 °C (Do not operate MB-D below 0 °C in liquid gas systems. Only suitable for gaseous liquid gas, liquid hydrocarbons destroy sealing materials.)	
Dirt trap	Sieve with 0.8 mm mesh width, filter made of random laid nonwoven fabric, microfilter, two-layer, changing the filter is possible without removing the valve.	
Pressure switches	Types GW…A5, ÜB…A2 / NB…A2 to DIN EN 1854 may be attached. For further information, refer to Datasheets 5.02 and 5.07 “Pressure Switches for DUNGS Multiple Actuators”	
Pressure regulator	Pressure regulator compensated for residual pressure, leakproof seal when switched off by means of valve V1 as per DIN EN 88 Class A. Setpoint spring permanently installed (no spring exchange possible). A vent line above roof is not required. Internal pulse tap provided.	
Solenoid valve V1	Valve as per DIN EN 161 Class A Group 2, fast closing, fast opening	
Solenoid valve V2	Valve as per DIN EN 161 Class A Group 2, fast closing
